<p>Overall, the author made a good attempt, but the presentation and discussion of this research needs to be improved. This paper looks like an academic work. The author should improve the following,</p> <ol style="list-style-type: none"> 1. Format the paper strictly according to the conference template available in the conference website: Paper Submission - RTMCS (irtmcs.com) 2. A formatted paper can have a maximum of 10 (Ten) pages and minimum of 6(Six)pages including figures, tables and references. 3. Callout of all figure number is missing in the paper 4. Citation is missing in the introduction section, similarly all citations should be in incremental order. 5. Author should follow basic conference guidelines to avoid rejection (Example: Minimum 5 Keywords in alphabetical order, 150 words abstract, Minimum 15 recent year references, Section and subsection numbering, citation inside theory, tables and figures numbers in order and in text, Equation and its variables numbering and explanation etc).* 6. Section I: Contribution and problem statement of the research is missing. Include to improve the quality of the paper. 7. Section II: Improve related work content, provide detailed review on recent year papers.2019-2021 research papers minimum 5 papers - maximum 10 papers. 8. Section III: Explain the proposed method effectively, what is the name of the proposed model. Mathematical models are insufficient to support this research, we recommend the author to include mathematical analysis to support this research. Analysis is mandatory. 9. Section IV & V: We couldn't find any comparison based on algorithms. Without state of art existing paper comparison, it's hard to understand the proposed model. Sample, follow this paper for comparison: https://www.researchgate.net/figure/Comparison-with-the-state-of-the-art-literature_tbl2_324543019 10. Equation 1 and 2 : Multiply with 100 to compare with percentage. 11. Figure 5 missing 12. Figure 6: What is meant by image, provide proper dataset name and image id. 13. In the conclusion the authors should state the limitations,research findings and future works of their method. 		

14. Reference section is too weak to consider for publication, including at least 15 published research articles (2019,2020 and 2021). Don't use links, white papers in the reference section.
15. There are 36 references but only 12 references you have cited. Every references must be cited in the paper in sequential order.

Minor comments*

16. English language: it is quite accurate but I recommend careful control in order to avoid trivial mistakes.
17. Don't use a bulletin.
18. Add abbreviation
19. Do not use words like "Our/We/us" in the paper

* Neglect it if you have already done it.
